

Making a new Port

FRESH ports

What is FreeBSD ?

- UNIX-like operating system descended from Research Unix via the Berkeley Software Distribution (BSD)
- Based on 4.4BSD-Lite
- Complete operating system
- Complete documentation
- More than 34399 ports package
- Open source project with big community

Tools for make a port

- Minimum for make a port
- ports-mgmt/porttools
- ports-mgmt/portlint
- ports-mgmt/poudriere

Skeleton of makefile

- **port create name_your_port**

```
# $FreeBSD$
```

```
PORTNAME=      port
PORTVERSION=
CATEGORIES=    games
MASTER_SITES=
```

```
MAINTAINER=   maintainer@email.com
COMMENT=
```

```
LICENSE=
LICENSE_FILE=
```

```
.include <bsd.port.mk>
```

Structure of real makefile

```
# $FreeBSD$  
  
PORTNAME=      mylib  
DISTVERSION=   1.0.0  
DISTVERSIONSUFFIX= -dev  
CATEGORIES=    devel  
  
MAINTAINER=    maintainer@email.com  
COMMENT=        Library for programming  
LICENSE=        ZLIB  
LICENSE_FILE=   ${WRKSRC}/LICENSE.md  
  
LIB_DEPENDS=   libglfw.so:graphics/glfw  
  
USES=          cmake  
USE_GITHUB=    yes  
GH_ACCOUNT=   myAccount  
USE_LDCONFIG=  yes  
USE_GL=        gl glu  
USE_XORG=     ice sm x11 xcursor xext xrandr xi xinerama xxf86vm  
  
CMAKE_ON=      SHARED USE_EXTERNAL_GLFW  
CMAKE_OFF=     STATIC BUILD_EXAMPLES BUILD_GAMES  
  
PLIST_FILES=   include/lib.h \  
               lib/lib.so \  
               lib/lib.so.1 \  
               lib/.so.${DISTVERSION} \  
               libdata/pkgconfig/lib.pc  
  
.include <bsd.port.mk>
```

How to build a port

- **make makesum** → distinfo file contains this :

```
TIMESTAMP = 1523396238
SHA256 (lol-myprogram-1.9.7_GH0.tar.gz) =
2be745bf1a132e3de2dd14c9b2f8a596499fb2569ceb00c82c2e9dd95d76f062
SIZE (lol-myprogram-1.9.7_GH0.tar.gz) = 95336821
```

- Complete files for port
 - **makefile**
 - **pkg-descr**
 - **pkg-plist**
 - **distinfo**
- Validation files port
 - **portlint -A**
- Make a patch
 - **make makepatch** and files with patch are in folder files/
- Testing port
 - **make test**

Poudriere

- Advance BSD-licensed utility for creating and testing FreeBSD packages.
- How use poudriere
 - Set configuration file **/usr/local/etc/poudriere.conf**
- Create port tree for poudriere :
 - **poudriere ports -c**
- Create jail with version FreeBSD
 - **poudriere jail -c -j 11amd64 -v 11.1-RELEASE -a amd64**
- Choose port for test
 - **poudriere testport -j 11_2amd64 -c devel/zapcc**

Submit the new port

- For new port
 - **shar `find my_port` > my_port.shar**
- For patch
 - **diff -u Makefile Makefile.orig > Makefile_patch**
- And submit to bugzilla form ...

Questions ?
